THE AI SCHOOL

Assignment : Research Assignment on 40 Terminologies in Cyber Security

Objective

The objective of this assignment is to help students understand important cyber security terminologies used in the IT and security industry. This assignment will improve students' technical vocabulary, foundational cyber security knowledge, and understanding of commonly used security concepts.

Students will also develop research skills, technical writing skills, and awareness of real-world cyber security practices.

Assignment Description

Students are required to prepare a detailed document explaining **40 important terminologies used in Cyber Security**.

For each terminology, students must clearly explain:

- Definition
- Meaning or purpose
- Importance in cyber security
- Real-world example or usage

The assignment should be written in a simple, professional, and easy-to-understand format.

Expected Output

Students are expected to prepare a well-structured and professionally formatted assignment document explaining all **40 Cyber Security Terminologies** in detail.

The final submission should include:

- A complete document in **PDF or DOCX** format
- Minimum **12–15 pages**
- Proper title page and formatting
- Clear headings and subheadings for each terminology
- Simple and understandable explanations
- Real-world examples wherever applicable
- Proper alignment, spacing, and readable font style
